

## Amp up your game, chat, and music

**Win faster.** When games sound realistic and your commands and calls are clearly heard, you'll win faster. Signature Plantronics audio in the Plantronics GameCom D60 headset enhances audio from your PC or gaming console and the premium RIG audio amp gives you control over EQ settings and the mix of game sound with chat or mobile music.

### FEATURES

- Lightweight and flexible, the headset is comfortable for hours and the 40mm stereo speakers deliver Plantronics signature audio: rich, resonant stereo with brilliant clarity and powerful bass
- Flexible, noise-canceling microphone reduces background noise and the amp lets you toggle mic feed between game chat and mobile calls or Skype™
- The amp lets you mix the balance of game action to either chat audio, mobile music, calls, or Skype™ without looking away from the screen
- Tap one of three EQ settings on the amp to choose between Pure for improved voice clarity, Intensify to boost mid-range audio, and Seismic for more excitement without bass distortion
- Convenient PC and console connections with cables long enough to reach a console across the room and cable management for a closer PC
