Welcome

Congratulations on purchasing your new Plantronics product. This user guide contains instructions for setting up and using your Savi W430 (D100 USB Adapter + WH210 Headset) Wireless Headset System.

Please refer to the separate safety instructions for important product safety information prior to installation or use of the product.

The enclosed DECT 6.0 wireless product uses restricted wireless radio frequencies which vary by country. DECT 6.0 devices are generally authorized for use in The Americas. Use of this DECT 6.0 product in unauthorized countries is a violation of law, may disrupt telecommunications networks and devices, and can subject you to fines and penalties by regulatory agencies. For specific countries in which DECT 6.0 devices may be lawfully used, please consult the following:

6 Troubleshooting and Common Questions ............................. 17
1 Package Contents and Features

1.1 Savi W430 USB Adapter and Charger

- USB Adapter
- Base Power Supply
- Charger Base
- USB Charging Cable

1.2 Savi WH210 Headset

- Headset with Pre-Installed Eartip
- Extra Eartips
Savi USB Adapter Features

- Indicator Light
- Subscription Button

Savi WH210 Headset Features

- Volume Up Button
- Volume Down Button (also controls mute)
- Call Control Button
- Indicator Light
- Microphone
2 Set Up

2.1 Connecting USB Adapter to PC

1 Insert the USB adapter into USB Port on PC. The indicator light on the USB adapter will be solid red to indicate the USB adapter is powered on and will turn solid green when it finds the headset.

**NOTE** The headset may have to be charged before the USB adapter can find it.

2 The USB adapter can be folded as shown.

**IMPORTANT NOTE** For best performance it is recommended that Windows is updated with Service Pack levels listed below:
- Microsoft Windows® XP Service Pack 3 (SP3) or later
- Microsoft Windows Vista® Service Pack 1 (SP1) or later

2.2 Connecting Power Supply to Charger Base

1 Connect the base power supply into the power jack on the charger base.

2 Connect the power supply to the outlet. The charging indicator light will be solid green.

2.3 Docking and charging headset

1 Gently push the headset into the charging cradle. The charging indicator light on the charger base will flash green to indicate that the headset battery is charging.

2 Charge for at least 20 minutes prior using for the first time. A full charge takes 3 hours. The indicator light will turn solid green.

**CHARGING TIME**

<table>
<thead>
<tr>
<th>Minimum charge before first use</th>
<th>Full charge</th>
</tr>
</thead>
<tbody>
<tr>
<td>20 min</td>
<td>3 hours</td>
</tr>
</tbody>
</table>

**NOTE** The USB charging cable can also be used to charge the headset. To successfully charge your headset with the USB cable the PC must be on and in an active state (not standby). The charging time will vary according to the number of other devices drawing power from the PC’s USB port(s).
2.4 Fitting Headset

The headset comes with a pre-installed medium eartip. To install a
different eartip see the following:

1 Remove the pre-installed eartip by pushing in and
   turning the eartip CLOCKwise, then pull firmly.

![Removing eartip](image1)

2 Choose the size and style of eartip that fits most
   comfortably. Align eartip tabs with notches in headset.
   Push in firmly and twist COUNTER clockwise.

![Choosing eartip](image2)

**NOTE** When installing a gel tip ensure the raised part of the eartip
is pointed toward the curved section of the headset as shown.

3 Slide the headset over and behind your ear, then press
gently toward your ear.

![Sliding headset](image3)

4 Rotate the microphone boom until it is pointed toward
   your mouth.

![Rotating microphone](image4)

5 The headset can be converted for wearing on left ear as
   follows:
   a. Rotate the microphone boom up.

   ![Rotating microphone up](image5)
   b. Turn microphone boom around.

   ![Rotating microphone around](image6)
   c. Rotate microphone boom down.

![Rotating microphone down](image7)
3 Using Your Headset System

Powering up headset
If the headset battery is charged, the headset is automatically on. The headset does not have an on/off button.

IMPORTANT It is highly recommended that you install the Plantronics software. Though your Savi system will operate without the software, it will limit the system’s full capabilities.

Placing, answering and ending calls with PC

</tbody>
</table>

Muting a Headset During a Call

To mute/unmute a call, press and hold the volume down button for at least 1½ seconds.
Subscribing a master headset

The headset and USB adapter that are supplied are subscribed to each other. However, if you wish to use a new master headset with your existing USB adapter, the units can be subscribed to each other by the following method:

1. Ensure your replacement headset is charged.
2. Double press the subscription button on the USB adapter. The USB adapter will flash red and green.
3. Press the volume up button on the headset for three seconds until the headset indicator light turns solid green.
4. When the indicator light on the USB adapter goes solid green, the headset and the USB adapter are subscribed to one another.

**Note** If the subscription process times out after two minutes or if the subscription process fails, the USB adapter indicator light will become solid red for four seconds and then return to its previous state. If this occurs, try to re-subscribe the headset again.

Conferencing in up to three additional headsets

While on a call, you can subscribe up to three additional headsets to your USB adapter for conferencing. As you add headsets to the adapter, an additional headset icon will appear in the Plantronics software screen with a number from 1 to 3 indicating the number of additional headsets subscribed to the adapter.

Guests may conference in as described below:

1. While you are on a call, place the guest’s headset into subscription mode by pushing the headset volume up button for three seconds until the headset indicator light becomes solid green.
2. Short press (less than one second) the subscription button on the USB adapter. The USB adapter light will flash yellow and green.
3. The USB adapter light will then turn solid yellow and you will hear a tone in the master headset indicating a guest wishes to join the call.
4. If you press the call control button on the master headset within five seconds, the guest is joined to the call.

Switching between wideband and narrowband audio

The Savi W430 is supplied with narrowband audio as the default. You can toggle between narrowband and wideband audio by doing a short press (less than one second) followed by a long press (more than three seconds) on the USB adapter subscription button while it is in an idle state. The USB adapter light will flash red for four seconds upon entering narrowband mode and flash green for four seconds upon entering wideband mode.

Setting the range

The Savi W430 is supplied with high range set as the default. You can change the range setting by holding in the subscription button of the USB adapter for three seconds while it is in an idle state. The USB adapter light will flash green for high range, yellow for medium range and red for low range.

Ending subscription

If the USB adapter is in subscription mode and you want to stop the adapter from searching for a headset, press the subscription button again. The subscription light will turn solid red for four seconds and then go to its previous state.

Placing the headset in sleep mode

If you won’t be using the headset for a long period of time and the headset will not be in the charging cradle, you can put the headset in sleep mode by pressing the call control button for three seconds while in an idle state. To exit sleep mode, press the headset call control button again for three seconds.
Talk Time
The Savi W430 will provide up to 6 hours of talk time. Talk time will be reduced when operating in wideband mode and/or if the headset is used consistently at a far distance from the adapter.

Toggle On/Off Headset In-Use Indicator Light
If you are not on a call, you can toggle the headset in-use indicator light on and off by pressing the headset volume down button for three seconds.

Headset tones

Out of range warning
If you are on a call and go out of the operating range, you will hear three low tones. You will hear a single mid tone when you are back in range.

If you stay out of range, active calls will be suspended. Calls will be re-established when you walk back into range. If you remain out of range for more than 5 minutes, the system will drop the call.

If you are not on a call and go out of the operating range and press the call control button, you will hear a single tone for the button press and three low tones for the failure to make a link.

Low battery warning
If you are on a call, you will hear a repeated single low tone every 15 seconds indicating that the battery is low. You should recharge the headset immediately.

If you are not on a call and press the call control button, you will hear three low tones indicating that the battery is low. You should recharge the headset immediately.

Mute warning
When mute is activated, you will hear three high tones. These tones will repeat every 15 seconds while mute is active.

When unmuted, you will hear three low tones.
5 Plantronics Software Platform

Softphone Support

Download Plantronics software for remote call answer/end with supported softphones at plantronics.com/software.

Remote call answer/end from the Savi headset is available for all softphones with no additional steps by the user except Skype™. For a list of supported softphones visit plantronics.com/software.

For Skype support, please follow these steps:

1. Skype will display the following message during the install of Plantronics Unified Runtime Engine “PlantronicsURE.exe wants to use Skype”. Choose “Allow Access” to connect.

2. You can also check Savi W430 Skype connection status by going to Skype and checking the Tools>Options> Advanced>Advanced Settings>“Manage Other Programs Access” setting.

Plantronics Update Manager

All required software for Savi W430 can be remotely updated when updates are available. Start Plantronics Update Manager from Windows Start Programs menu to change settings such as automatic or manual check for updates.

Check for Updates Automatically: By enabling this check box, you will activate a periodic automatic check for available software updates.

Check for Updates Now: You can choose to check for available software updates at any time by clicking on the Check For Updates Now button in Update Manager: From the Start menu, click Programs, then Plantronics, then open Plantronics Update Manager.

Install Checked Updates: Following an AUTOMATIC OR MANUAL CHECK FOR UPDATES, this field will be populated with any applicable software updates and the INSTALL CHECKED UPDATES will begin installation.
Plantronics Control Panel

User preferences and various device settings can be changed using the Plantronics Control Panel. To start this program, click Start>Programs>Plantronics then open Plantronics Control Panel.

Battery Life

At the lower left corner of the screen (and for all software screens), you will see one of the following icons indicating the approximate charge left in the headset battery.

![Battery icons: 100%, 75%, 50%, 25%, 0%]

Devices Tab

To configure your settings, select Plantronics D100 from the pull down menu and click the Device Settings box. Below are the setting options and defaults for the USB adapter and headset.

**NOTE** Some parameters that do not apply to a particular Plantronics device may appear grayed out.

### Device Settings – USB Adapter

<table>
<thead>
<tr>
<th>Feature</th>
<th>Settings</th>

<tr>
<td>Audio PC Audio Bandwidth*</td>
<td>Wideband/Narrowband</td>
<td>Narrowband</td>
</tr>
</tbody>
</table>

*The system will support both narrowband and wideband audio from the PC. Wideband audio delivers heightened speech clarity and life-like fidelity. However, wideband audio consumes more battery power and has more stringent access criteria which reduces the number of systems that can be deployed in a small area.

All PCs support wideband audio.

When switching between narrowband and wideband audio, you must re-establish the audio link for the changes to take effect.

Feature Set Lock (See Device Settings - Security)

Device Settings – Security

The Plantronics software allows some of the device parameters settings to be locked by the IT staff and prevent end users from changing them. The ability to lock/unlock these parameter settings requires the creation of a password. In order to lock/unlock any parameter setting follow these steps:

Feature Set Lock

1 From the Security screen, create and confirm your new password and press Set. This will store the password directly in the device.

2 In order to lock/unlock some parameter, go to the USB Adapter or the Advanced tabs of Device Settings and enter the password that you stored in the device.

3 Select your settings from the USB Adapter/Advanced settings page and lock/unlock each feature as desired.

Change Password

1 You can always change the old password to a new one in the Change Password section. If a password is not stored in the device, the only way to store a password in the device is to use Feature Set Lock. You will only able to change a password if there is a previous password set in the device.

NOTE In case you forget your password, you will need to call your local Plantronics Technical Support for assistance.
## Preferences Tab

The Preferences Tab allows you to set preferences for the media player as well as other general settings.

<table>

### Ring Both Headset and PC

This parameter gives you the option to have the PC ringtone played on both the headset as well as the PC speaker.

When this parameter is selected, the PC ringtone will be heard on both the PC speaker as well as the headset.

When this parameter is not selected, the PC ringtone will only be heard on either the headset or the PC speaker based on how the PC audio has been set up.

Microsoft Lync/Office Communicator Certified product:
Default Setting = Not selected

Standard product: Default Setting = Selected

**Microsoft Lync/Office Communicator Dial-tone Enabled**

If this feature is selected, when a PC radio link is established, Microsoft Lync/Office Communicator will assume the user is trying to place a VoIP call and provide a dial tone.

If this feature is not selected, when a PC radio link is established, Microsoft Lync/Office Communicator will sit idle.

"Microsoft Lync/Office Communicator Dial-tone Enabled" can be set selected or not selected.

Microsoft Lync/Office Communicator Certified product:
Default Setting = Selected

Standard product: Default Setting = Not selected

**Audio Sensing Enabled**

Audio Sensing is a special feature supported by Plantronics wireless devices that can detect an audio signal at the USB port and automatically establish a PC radio link between the USB adapter and wireless headset without the user having to press the PC call control button. If the parameter “Microsoft Lync/Office Communicator Dial-tone Enabled” is selected, then every time a PC radio link is established the Microsoft Lync/Office Communicator dial tone will be heard. However, the user may have pressed the PC call control button to listen to music, etc., and does not want to hear the dial-tone. In this case, if the user selects the “Audio Sensing Enabled” parameter, the radio link will be established automatically when any PC audio is detected at the USB port, thus eliminating the need for the user to press the PC call control button.

"Audio Sensing Enabled” can be set to selected or not selected.

Microsoft Lync/Office Communicator Certified product:
Default Setting = Selected

Standard product: Default Setting = Not selected

**Maintain Headset to PC Link**

This parameter forces the radio link to the PC to stay active even after the call has ended. This can eliminate the need to re-establish the radio link when switching between PC audio applications.

Default Setting = Not selected

### About Tab

The About Tab provides on-line access to this printable user guide and also includes Plantronics contact information. The current version of software and firmware currently running on your system is also shown here.
