

SupraPlus® Wireless Professional Headset Multi-Shift Pairing Instructions

Do This First

Charge and set up your SupraPlus® Wireless Headset System according to instructions

Then

To pair another headset to the same base:

- Enable the multi-shift pairing feature: Hold the speaking volume minor adjust *up* button on the back of the base until the power indicator light flashes – approximately 5 seconds
- Place the charged headset in the charging cradle. The red indicator light on the base will flash for 2 seconds indicating the pairing feature is enabled
- Within 10 seconds, press the + or – listening volume button on the headset until the talk indicator light illuminates - approximately 3 seconds - to indicate pairing mode
- The indicator light will go out after successfully pairing your headset.

Repeat above steps if headset and base do not link when call control button is pressed.

NOTE: Only the last paired headset will work with the base. You must not be in talk mode (i.e. on a call) to enable or disable this feature.

To disable the multi-shift pairing feature, press the speaking volume minor adjust *down* button until the power light flashes...approximately 5 seconds.
